FireFTP
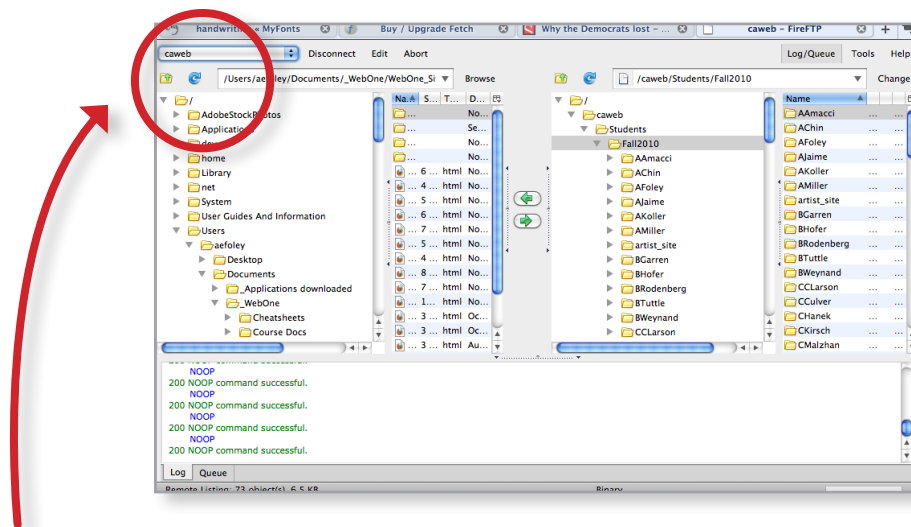

FireFTP is an FTP plugin for Firefox. It does what Fetch does.
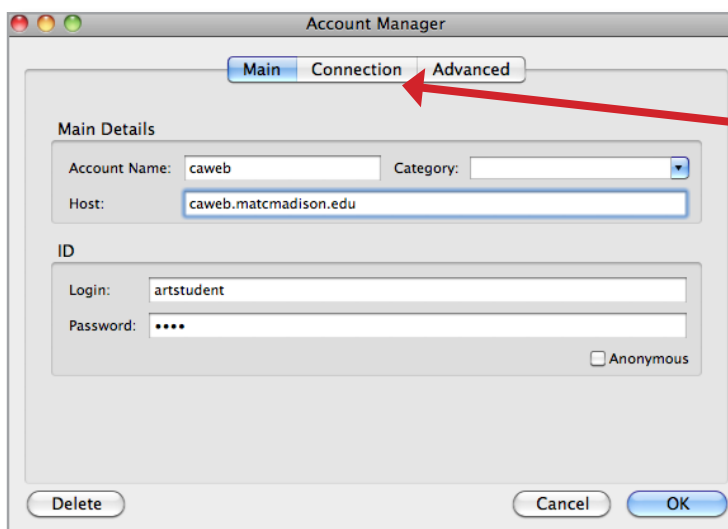

It's free.

Here's how to use it to upload/download files from your CAWEB site.

- **Find FireFTP it by Googling FireFTP and install it.**
- **Open it in Firefox from the menu: Tools > FireFTP**
- **This is what it looks like.**

- **In the upper left hand corner, choose "Create new account" from the dropdown.**

- **In the Account Manager box, enter these settings in the Main window:**

Go to the Connection Window by clicking here.

- **Then, enter this setting in the Connection window:**

Remote: /caweb/Students/Fall2010

Keep directories in sync

- **After you click ok, click "Connect" in the upper left of the page.**
- **You'll see the files on your computer on the left, and the files on CAWEB on the right.**

- **Move files back and forth using the green arrows.**
- **Be VERY CAREFUL to have your folder selected on the right before you start moving things over. You don't want to load up another student's folder with your files.**
